SIMPLIFYING OT SECURITY

From HOU.SEC.CON 2024

In the complex world of cybersecurity, the challenge of safeguarding operational technology (OT) is becoming increasingly critical. OT systems, which include everything from industrial control systems to building management systems, are essential to maintaining the operations of countless industries. Yet, they face unique security challenges that differ from those of traditional IT systems.

On September 11th, we announced a compelling OT security session at the October 2024 HOU.SEC.CON event hosted by our Senior Solutions Architect, Paul Veeneman, and his colleague, Joe Weiss. We're proud to say that attendance at their presentation was impressive!

TITLE: *OT Security: When the Cure is Worse Than the Disease*

This session spotlighted the challenge of implementing security measures and maintaining secure operational efficiency. Many organizations pile solutions on top of solutions, which over-complicates security, expands the network battle space, and hinders productivity.

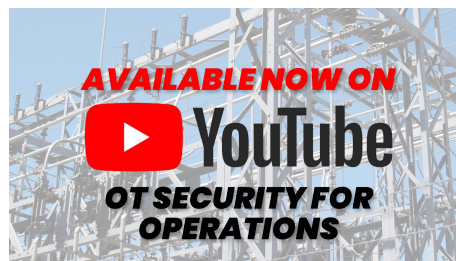

Paul and Joe provided valuable guidance regarding OT security strategies that simplify the solutions landscape and actually improve network and operational security.

Don't Take Our Word For It: See the Presentation Yourself

For those who were unable to attend the HOU.SEC.CON event, the presentation from the "OT Security When the Cure is Worse Than the Disease" session is available ***HERE on YouTube***.

This session covers a range of topics, including network segmentation, encryption, authentication, secure remote access, and asset & risk management. Simplifying OT security is critical to safeguarding your organization's critical assets, data, and operations.

Whether you're a seasoned cybersecurity expert or new to the field, this presentation is an invaluable resource for anyone seeking to improve their understanding of OT security. The OT-centric playbook that it highlights offers practical tips on how to frame an OT security strategy, and how to tackle the OT security challenges facing your organization.

About Us

Blue Ridge Networks, Inc., is a proven and trusted provider of effective CPS/OT/IT cybersecurity solutions. Our zero-trust quantum resistant “CyberCloak™” capabilities are protocol agnostic, compatible with legacy systems, and deploy quickly with minimal overhead. We protect continuous operations by enabling secure remote access while preventing external network infiltration and mission-critical data exfiltration.

Regulated, Commercial, and Industrial organizations have trusted Blue Ridge Networks for over 20 years to prevent exploits and receive continuous returns on their investments while achieving uninterrupted operational efficiency.
