Moving Cybersecurity Upstream to Achieve Resilience

From Metro State University St. Paul January 7, 2025

Moving Cybersecurity Upstream Panel Discussion

What does it take to achieve cyber resilience today, and to ensure it for the future? It can feel daunting to address such challenges as dealing with legacy systems, fatigue & fatalism, misalignment of risk resources, and varying levels of leadership experience. But, cyber resilience **IS** achievable.

On January 7, 2025, our Senior Solutions Architect, Paul Veeneman, sat down with two top cybersecurity authorities to discuss what is needed to ensure cyber resilience. Clea Ostendorf, CISSP is the co-founder and CEO of Wolfpack Security. Dr. Sean Costigan, PhD is the Managing Director of Red Sift. Together, these three experts paint a strong picture of what it takes to achieve resilience.

How does your organization manage cyber risk? Where do you see the gaps between IT and OT leadership with regard to network and operational security? Who is responsible for what?

These are just a few of the questions that plague entities as they evaluate their approaches to cybersecurity. This video answers these questions and more. Topics related to application security and governance are woven into this compelling discussion
